① Size 10 inches
② But observed through 350 power
telescope

③ Therefore, actual size
of object - the naked eye -
1/350th smaller.

④ $BSP \frac{10.00}{.02+}$

object little over
two-handles of
on inch
actual size.

Just a speck.

ATTC comment:

1. The only object other than a possibly balloon that was overhead of receiver at that time was the star Vega, but this could not have been seen during daylight.
2. Probably some conventional object whose size is exaggerated by over-active imagination of these youngsters.

over-active imagination
